

Ultimate Outdoor App - Product Prompt

This document defines a master prompt for building an all-in-one outdoor adventure platform combining Strava, AllTrails, ski apps, GPS navigation, and AI discovery. Core Vision: A unified outdoor operating system that merges tracking, maps, skiing, and discovery into one adaptive adventure feed powered by real-time conditions and user behavior. Core Components: 1. Activity System - Hiking, running, biking, skiing, climbing, water sports, and more - Unified activity model instead of separate apps 2. Map Engine - Topographic, satellite, 3D terrain - Ski resorts, trails, backcountry zones - Weather, snow, avalanche, heatmaps - Offline navigation and GPS tracking 3. Discovery Feed (Spotify-style) - Personalized adventure recommendations - "Discover Weekly" for outdoor routes - Seasonal and weather-based suggestions - Hidden gems and crowd avoidance 4. Tracking System - Live GPS tracking - Elevation, speed, performance metrics - Training load and adventure history - Unified "Adventure Timeline" 5. Ski Mode - Lift status and resort maps - Snow depth and avalanche risk - Ski touring and freeride routes - Integrated winter overlay on maps 6. Navigation & Planning - Turn-by-turn outdoor navigation - AI route generation - Multi-day trip planning - GPX import/export 7. AI Outdoor Guide - Suggests routes based on weather, fitness, and location - Answers safety, gear, and conditions questions - Trip planning assistant 8. Social Layer - Activity feed, groups, challenges - Route sharing and adventure journals - Leaderboards and live tracking 9. Safety System - Emergency SOS and live tracking - Avalanche and weather alerts - Offline emergency support Key Insight: The app is not just tracking or maps — it is a decision-making system for outdoor life, telling users where to go next based on conditions, preference, and safety.
